## PROFILE

I am a full stack developer with an extensive background in music production, graphic design, and multimedia editing with a passion for creating the best interactive user experience. As a highly adaptable and quick self-learner, I am ready to tackle any challenges thrown my way. Proficient at remotely managing multiple projects and deadlines while collaborating with different teams to ensure a timely delivery.

## PROJECTS

### Unit Clerk Tools

Using React with Node.js and Express, I built an app to use at my part-time job tracking calls, pages, and consults to doctors from the Emergency Department. The app features full CRUD functionality using Mongoose and MongoDB for managing schemas and database. Individual listings are displayed in a table row and paginated when the page length is reached.

### Trip Hut

This was a very fun project to incorporate the demo MongoDB AirBnB database and Next.js to utilize the Server Side Rendering(SSR) features in order to aggregate listings and search results displayed in various component cards.

### Double Down Entertainment

Using Next.js, I was able to create a clean static site for an entertainment company displaying the various services and DJ roster with the Apple Podcast player embedded.

## CERTIFICATES

### Learn Java | Certificate Codecademy

08/2022 – 08/2022

### Software Engineering Virtual Experience JP Morgan Chase

08/2022 – 08/2022

### Responsive Web Design | Certificate freeCodeCamp

05/2022 – 07/2022

## SKILLS

JavaScript	React	Next.js
TailwindCSS	Redux	API Integration
Node.js	Express	MongoDB
Mongoose	Git	Figma
Adobe Photoshop	Adobe Premiere	Adobe After Effects
Ableton Live
